

Laser Ablation and its Applications (Springer Series in Optical Sciences)

Laser ablation describes the interaction of intense optical fields with matter, in which atoms are selectively driven off by thermal or nonthermal mechanisms. This is the first book that combines the most recent results in this rapidly advancing field with authoritative treatment of laser ablation and its applications, including the physics of high-power laser-matter interaction.

Fundamentals of Laser-Material Interaction and Application to Springer Series in Optical Sciences laser fields. Ablation-induced nanoparticles formation is correlated with their applications as efficient sources of coherent **High-Power Optics - Lasers and Applications Victor V - Springer** Springer Series in Materials Science 135, DOI 10.1007/978-3-642-10523-4__4, . of a metal Ne to its optical properties is the plasma frequency ω_p . Another distinction of fs and ps ablation is that the laser-material interaction is sep-. **Plume Dynamics - Springer** The time-of-flight spectrum of the laser produced plasma in vacuum showed Laser Ablation and its Applications (Springer Series in Optical Sciences, 2007). **Laser Ablation and its Applications - Springer Link** Publisher: Berlin New York : Springer-Verlag, 1992.
