

# A natural history of the most remarkable quadrupeds, birds, fishes, serpents, reptiles, and insects Volume 2

This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1825 Excerpt: ... sterling; and a full ship of about three hundred tons burthen, will produce more than five thousand pounds from one voyage. The Whale-fishery begins in May, and continues through the months of June and July: but whether the ships have had good or bad success, they must come away and get clear of the ice by the end of August: so that in the month of September, at furthest, they may be expected home; but the more fortunate ships often return in June or July. Though the Sword Fish belongs to a quite different tribe from the whale, yet the inveterate hostility which the former bears to the latter has induced us to bring them both under one point of view. There are two species, which differ from each other only in a very trifling degree; the one is the Broad-finned, the other the European Sword Fish. The second is the subject of the engraving. It is a very large, powerful, and voracious animal, growing to the length of upwards of twenty feet. The body is of a conical form, black on the back and white under the belly. The mouth is large and toothless, and the tail remarkably forked. The most curious peculiarity of the fish is its long, pointed, sword-like upper jaw, which is of a substance like a coarse kind of ivory. This fish has sometimes been found on the British coasts, and is very common in the Mediterranean. The Sicilians consider its flesh as being equal to that of the sturgeon. The Sword Fish possesses a wonderful degree of strength. The Leopard man of war was struck by one of them on her return from a cruise. Though the blow was given while the animal was following the ship, and consequently with less force than if it had been given in an opposite direction, the

sword passed through one inch of sheathing, three inches of plank, and buried itself four i...
