

Production Networks and Enterprises in East Asia: Industry and Firm-level Analysis (ADB Institute Series on Development Economics)

The book provides a comprehensive examination of patterns and determinants of production networks in East Asia, a key driver in the regions global success. It provides the reader with an accessible understanding of the theoretical literature on production networks and recent developments in empirical analysis at the industry and firm-levels. The topics covered in the book include: gross trade in parts and components and gravity models, trade in value added, industry case studies, and micro data econometric studies of firm heterogeneity in production networks. The micro data econometric studies explore key aspects of the heterogeneity of firms in East Asian production networks such as technological capability, the entry of small and medium enterprises into production networks, business use of free trade agreements, and access to credit. Blending new sources of data, empirical tools and econometric methods this book is highly recommended for readers who seek to understand the workings of the complex web of production networks in East Asia.
