

# Angiogenesis: From the Molecular to Integrative Pharmacology (Advances in Experimental Medicine and Biology)

Proceedings of the 5th Biannual International Meeting on Angiogenesis: From the Molecular to Integrative Pharmacology, held July 1-7, 1999, in Crete, Greece. Angiogenesis, as a vastly complex biological process, has challenged researchers from all basic scientific disciplines, including pharmacology, biochemistry, physiology, embryology and anatomy. The significance of this phenomenon for the study of disease states has also interested clinicians from a number of specialist fields. This multidisciplinary work reflects the growth of awareness of concepts such as angiogenesis based therapy, the enormous therapeutic and commercial potential of which has attracted major research and investment in recent years. This volume, which aims to bridge the gap between basic and clinical methodology and understanding, presents the most up-to-date developments in this field.
