

Biostatistics and Computer-based Analysis of Health Data Using SAS

Biostatistics and Computer-Based Analysis of Health Data Using SAS is primarily intended for health researchers who have basic knowledge in statistical methodology. It mainly focuses on the use of SAS software in the statistical approach for the management of data modeling. The authors focus on the practice of biostatistics methods that are essential to clinical research, epidemiology, and analysis of biomedical data. A comparison of two groups, ANOVA, linear regression and logistics, data analysis, and survival analysis of categorical data is presented to help readers implement the use of the SAS software into practical scenarios. Presents elements of the language and descriptive statistics. Supplies measures of association, comparison of means, and proportions for two or more samples. Explores linear and logistic regression. Provides survival data analysis.
