

# Bulletin - State Geological and Natural History Survey of Connecticut Volume 6

This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1906 Excerpt: ...while the base is surrounded by talus slopes of large quartz boulders. The true nature of the formation is not easily determined without a study of the surrounding country. The rock all around it is the aplitic Sterling granite-gneiss, which strikes nearly east and west, while the trend of the quartz range varies from N.150E. on Long Hill to due north on Lantern Hill. The whole range of hills is composed of milky quartz, with its surface usually roughened by frost action, and preserving evidence of close jointing in a direction varying from due north to N. 20 E. To all appearance Lantern Hill is an enormous simple quartz vein; but the hill north of the main mass, and also Long Hill, present evidences of a more complicated structure. In these places the quartz is distinctly foliated, often with sericitic or slightly chloritic mica along the planes of schistosity. The rock as a whole is porous and often mottled with rusty spots, and lacks cohesive strength, save for the numerous veins of pure white quartz, which traverse the porous material and form an intricate network. The larger white veins, usually extending in a north and south direction, are connected by numerous smaller veinlets, which diminish in size until they are hardly visible. The veins thicken in places, and branch until, when veinlets are sufficiently numerous, practically the whole rock is impregnated with the vein material, forming a mass of white quartz such as appears in the crest of Lantern Hill. At the summit of Long Hill, where the surface of the ledge has been protected from frost action, the foliation of the porous quartz strikes in the same direction as that of the aplitic granite which surrounds the hill. This fact suggests the

probability that the porous rock was originally aplite, i...
