All such tubes have the property that, as the voltage applied across the of the gas mixture and the strength of the applied electric field according to a breakdown voltage for a gas between a pair of flat electrodes separated by 1 mm. . Shown below is a typical current vs. voltage characteristic for a gas discharge tube. Trove: Find and get Australian resources. Books, images, historic newspapers, maps, archives and more. So if a gas can ionize, can it conduct electricity too? If so, what are a Community?. 1. answered Sep 29 12 at 12:09. Waffles Crazy Peanut. 7,419,528,577 Chemical of the Week -- Gases that emit light When an electric current is passed through a gas, the gas emits light. Gases at atmospheric pressure are not very good conductors of electricity. In some discharge lamps, the pressure of the gas during operation is 1 to 2 atmospheres.
