

Gender Roles in Immigrant Families (Advances in Immigrant Family Research)

Researchers recognize that theoretical frameworks and models of child development and family dynamics have historically overlooked the ways in which developmental processes are shaped by socio-cultural contexts. Ecological and acculturation frameworks are especially central to understanding the experiences of immigrant populations, and current research has yielded new conceptual and methodological tools for documenting the cultural and developmental processes of children and their families. Within this broad arena, a question of central importance is on how gender roles in immigrant families play out in the lives of children and families. Gender Roles in Immigrant Families places gender at the forefront of the research by investigating how it interplays with parental roles, parentchild relationships, and child outcomes.
