

Mental Health, Spirituality, and Religion in the Middle Ages and Early Modern Age (Fundamentals of Medieval and Early Modern Culture)

Understanding mental health from a religious, literary, and philosophical point of view represents a critical component in current research on alternative approaches to well being, spiritually and physically. This volume contains a selection of papers drawn from a conference at The University of Arizona in May 2013 addressing all these issues from a variety of perspectives, inviting us to consider them especially through a historical lens.
