

Nano-Biophotonics Applications in Advanced Cellular and Molecular Imaging (Biophotonic Science and Engineering)

Part of the new Biophotonic Science and Engineering series, Nano-Biophotonics Applications in Advanced Cellular and Molecular Imaging provides up-to-date coverage of biophotonics techniques ranging from probes for cellular and molecular imaging to imaging at the single-cell and single molecule-level. Extensively illustrated, this book features contributions from leading experts from various national research institutions. Additional topics include plasmonic probes, quantum dots, fluorescent proteins, multiphoton microscopy, ultra-sensitive spinning-disk confocal microscopy, soft X-ray imaging of individual cells and organisms, nonlinear imaging, and stimulated emission depletion microscopy.
