

Environmental and Food Safety and Security for South-East Europe and Ukraine (NATO Science for Peace and Security Series C: Environmental Security)

This book covers important aspects of the field of food security and safety, ranging from fundamental production, through advanced water treatment technologies and detection of novel pollutants, to management and policy making. The discussion strives to develop an integrated approach to solving the associated problems by simultaneously considering sociological, ecological and economic aspects. Special focus is on the environmental management systems that should be integrated in the processes of environmental risk assessment. Also addressed are other technologies applied in the service of detecting, preventing and monitoring possible threats to food security and safety. With its variety of subjects, this volume can serve both as a textbook for advanced studies and as a useful reference source for professionals.
