

Testacea britannica or natural history of British shells, marine, land, and fresh-water Volume 2; including the most minute: systematically arranged and embellished with figures

This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1803 Excerpt: ...on the body. Diameter one tenth of an inch. Da Costa has given this species from Mr. Morton, who found it plentiful in boggy places in Northamptonshire. It is not an uncommon shell in many parts of England, but from its smallness has escaped general notice. Mr. Walker speaks of its inhabiting marshy ground, and not unfrequent about Faverjham. We have received it from Mr. Boys of Sandwich. It is most commonly found in rivers and streams of water, after floods, amongst the sand, and other refuse, brought down by the current; having been swept from the neighbouring wet and swampy situations. Is very plentifully found after a flood, on the banks of the river Avon, in North Wiltshire, about Larkham; and not uncommon amongst the drifted sand of the Kennet, at Nezcbury in Berkshire. Sometimes met with in dry situations, on ditch-banks and old walls.

47. Turbo helycinus. Phil. Trans. LXXVI. t. 3. f. 1. to 4. Crenella. (Lightfoot.) Tab. 13. f. 3. H. in every respect like the last, except that it is striated across the volutions in a strong and regular manner, and is frequently covered with a light-brown epidermis. We received this shell from our estimable friend Mr. Boys, by the name prefixed; he considered it as distinct from the H. paludosa, and said it inhabited mossy walls, and banks, where that shell was not to be found. We cannot, however, help expressing some doubts with respect to its being really distinct, with every submission I'll to to such authority: but as we have frequently found it with the paludosa, and often times so little striated as scarce to be separated, think it but right to prepare others for so nice a discrimination. Mr. Lightfoot has given a very good figure of

this shell in the Philosophical Transactions for 1786, considering it a nondesc...
