

War Neurology (Frontiers of Neurology and Neuroscience, Vol. 38)

Interest in the history of neurological science has increased significantly during the last decade, but the significance of war has been overlooked in related research. In contrast, this book highlights war as a factor of progress in neurological science. Light is shed on this little-known topic through accounts given by neurologists in war, experiences of soldiers suffering from neurological diseases, and chapters dedicated to neurology in total and contemporary war. Written by experts, the contributions in this book focus on the Napoleonic Wars, the American Civil War, the Franco-Prussian War of 1870, World Wars I and II, and recent conflicts such as Vietnam or Afghanistan. Comprehensive yet concise and accessible, this book serves as a fascinating read for neurologists, neurosurgeons, psychiatrists, historians, and anyone else interested in the history of neurology.
