

Testacea britannica or natural history of British shells, marine, land, and fresh-water Volume 1; including the most minute systematically arranged and embellished with figures

This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1803 Excerpt: ... Conch. vii. t. 43. f. 453. Venus nebulosa. Pult. Cat. Dorset. p. 34. Venus rhomboides. Br. Zool. No. 55?--Turt. Lin. iv. p.241? V. with a fub-cordated, moderately strong shell, rounded at both ends like the last, but not so broad in proportion to its length; striated transversely, and marked with very faint longitudinal stri?, scarcely discernable without a glass: umbo placed near to one end, small, pointed, turned to one side; beneath which is a lanceolate, cordiform depression: colour various, sometimes white, elegantly S. marked marked with brown, or blueish-black, zigzag lines; or mottled with cinereous; others are plain brown, frequently of a yellowish tinge, and sometimes deep ferruginous about the umbo: in most there are a few streaks at the anterior margin. It varies also in shape; some are nearly as long as they are broad; others extend at the anterior end, and become more pointed, but in all the front margin is considerably more rounded than in the Virginea. Inside yellowish-white; margin plain; valves concave: hinge furnished with three teeth in each valve, the middle one a little bifid. Length commonly about one inch breadth an inch and three-eighths. This species has sometimes been confounded with the Virginea, but may be readily known, not only by its inferior size, different colour and markings, but by its being more convex, the stri? much finer, and the front margin more rounded; besides which it is always longer in proportion to the breadth. Lister has given a very good figure of this shell, and has marked it as an English species. It was known also to Doctor Solander, and was called in the Museum Portlandicum by the name of nebulosa, which name was
